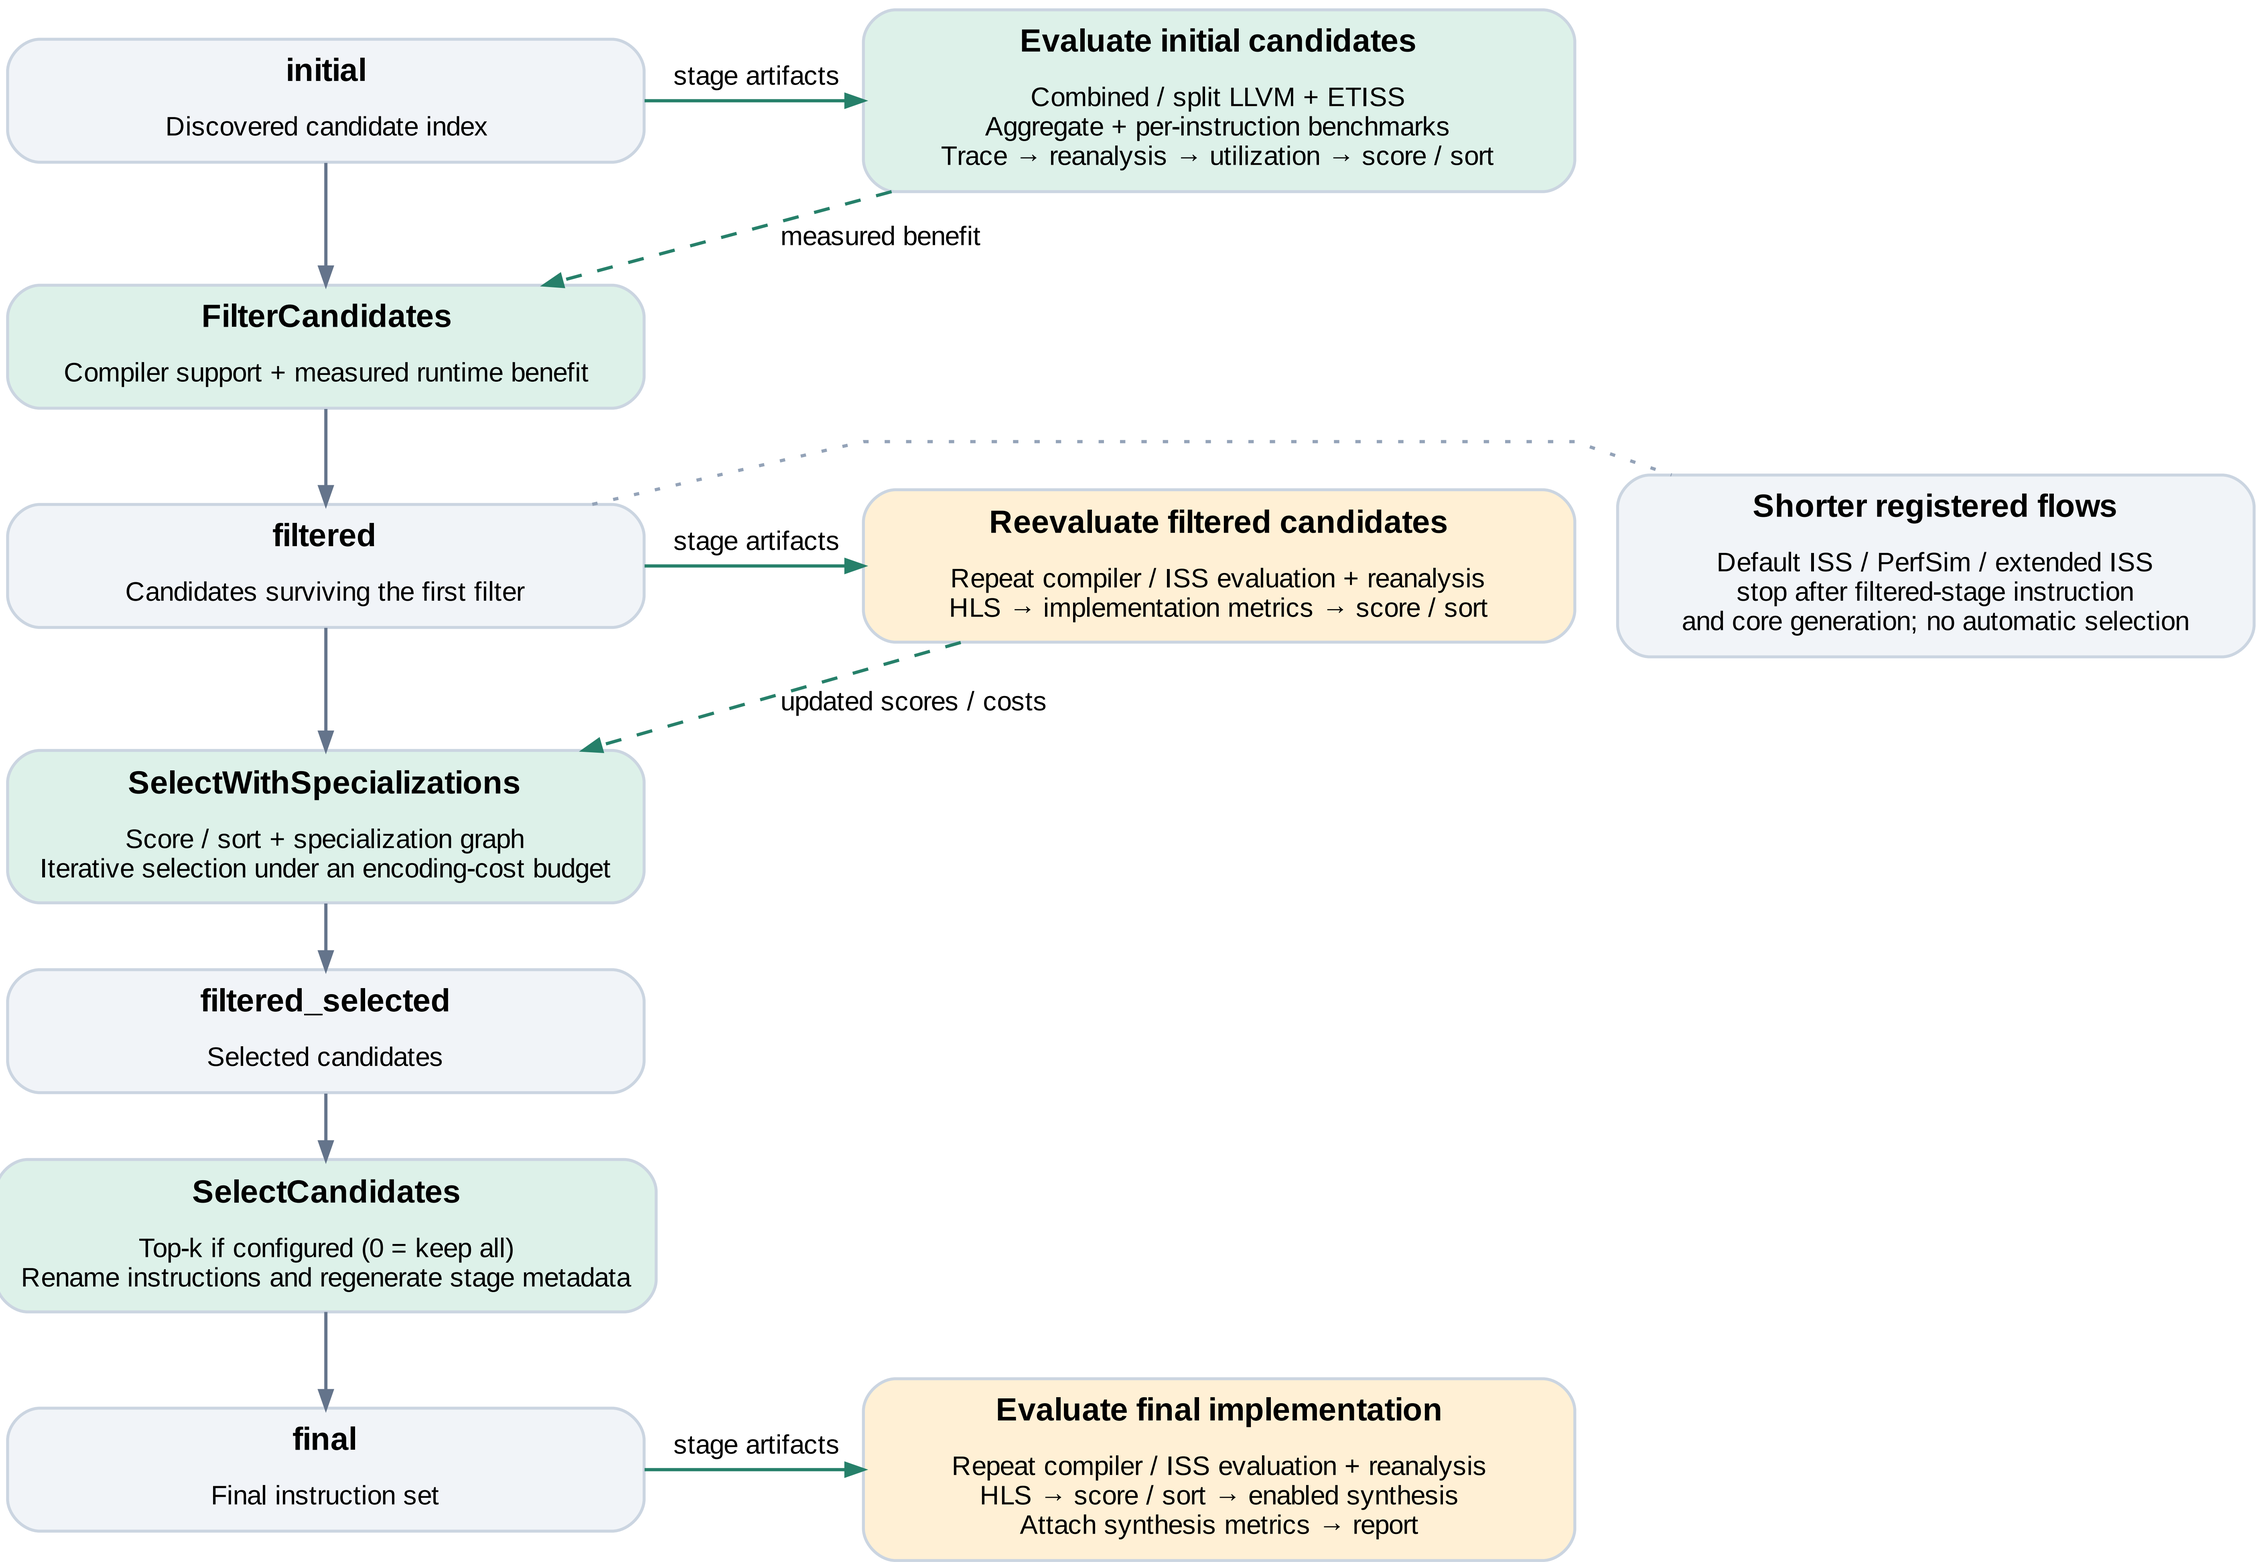
GenIE | Candidate refinement

Main HardwareSelectionFlow path · solid arrows: candidate progression · dashed arrows: measurement feedback



Explicit stages, shared evaluation

Evaluation is repeated at initial, filtered, and final; dashed feedback does not imply an automatic runtime loop.
HardwareSelectionFlow uses the solid path. Standalone phase APIs also expose filtered2 / filtered2_selected / prelim / prelim_filtered.
HLS / synthesis depend on configuration and external tools. Physical hardware validation remains pending.
